  S.B.V. Noor Nagar | 2023

- **Secondary School**
  J.N. International School | 2021

Languages

English, Hindi, Urdu

About Me

Full-stack developer trusted with end-to-end ownership of a business's digital operation. The customer-facing storefront, the internal systems behind it, and the AI and automation layer that connects them. Currently accountable for the entire technology function at a design and production studio, working alongside design and production teams across the studio and every client account’s architecture, full project development, AI chat assistants, sales analytics and workflow automation. Previously led a cross-functional development and design team while owning client relationships directly. 3+ years shipping systems that move commercial numbers, an 8x conversion-rate increase on a storefront rebuilt from scratch, internal ERPs delivered solo, and manual operations replaced by automation.

Experience

Software Developer | July 2026 – October 2026 — DESIGN DIMENSIONS

- Own the entire technology function for the studio and its full client portfolio, covering architecture, build, integration and optimisation, as the sole technical decision-maker.
- Build and deploy AI chat assistants trained on studio and client data to answer product queries, qualify inbound leads and resolve first-line support unaided.
- Design sales tracking and analytics systems giving leadership real-time visibility into pipeline, revenue attribution and campaign performance.
- Work closely with design and production teams to translate business requirements into scalable digital products, internal systems and automation workflows.

Software Developer | April 2026 – July 2026 — OYELA TECHNOLOGIES

- Built the company's internal ERP system from scratch, replacing manual processes and streamlining daily operations across departments.
- Partnered with data and business intelligence teams on internal reporting systems, and optimised the company Shopify storefront for performance and conversion across multiple cross-functional teams.
- Developed and integrated internal tools and workflows to improve operational efficiency and reduce dependency on manual processes.

Lead Software Developer | July 2024 – April 2026 — RADIANT WEB TECH

- Led end-to-end delivery on custom e-commerce builds, owning technical architecture, development and project launches.
- Developed advanced backend workflows, custom middleware and headless implementations using Shopify Admin, REST and AJAX APIs.
- Managed and mentored a cross-functional development team while owning direct client relationships, translating commercial goals into technical milestones and consistent delivery.
- Collaborated directly with designers, marketers and stakeholders to turn requirements into high-performing, scalable e-commerce experiences.

Full Stack Web Developer | Aug 2023 – July 2024 — THE AYURVEDA CO.

- Rebuilt the entire e-commerce store from scratch on a custom theme, sharply reducing page load times and driving a 8x increase in conversion rate.
- Partnered with product and marketing teams to improve user experience, Core Web Vitals, customer journeys and overall site performance.
- Integrated third-party marketing tools, subscription models and advanced tracking pixels to improve attribution and customer engagement.

Web Developer & Designer | Feb 2023 – May 2023 — LPPR

- Delivered responsive, accessible, SEO-optimised website end to end, translating Figma and Illustrator layouts into scalable production code.
